

New resistance genes against potato late blight

*Śliwka J, Jakuczun H, Chmielarz M, Hara-Skrzypiec A,
Tomczyńska I, Kilian A, Zimnoch-Guzowska E*

Plant Breeding and Acclimatization Institute – National
Research Institute, Poland

Solanum michoacanum (Bitter.) Rydb. 2x (1EBN) VIR5763

CORRELL: THE POTATO AND ITS WILD RELATIVES

285

FIGURE 108.—*Solanum × michoacanum* (Arsène 2896, type collection): 1, flowering plant, $\times\frac{1}{2}$; 2, calyx, spread out, $\times 2$; 3, corolla, spread out, $\times 2$; 4, stamen, dorsal view, $\times 2$; 5, pistil, $\times 2$.

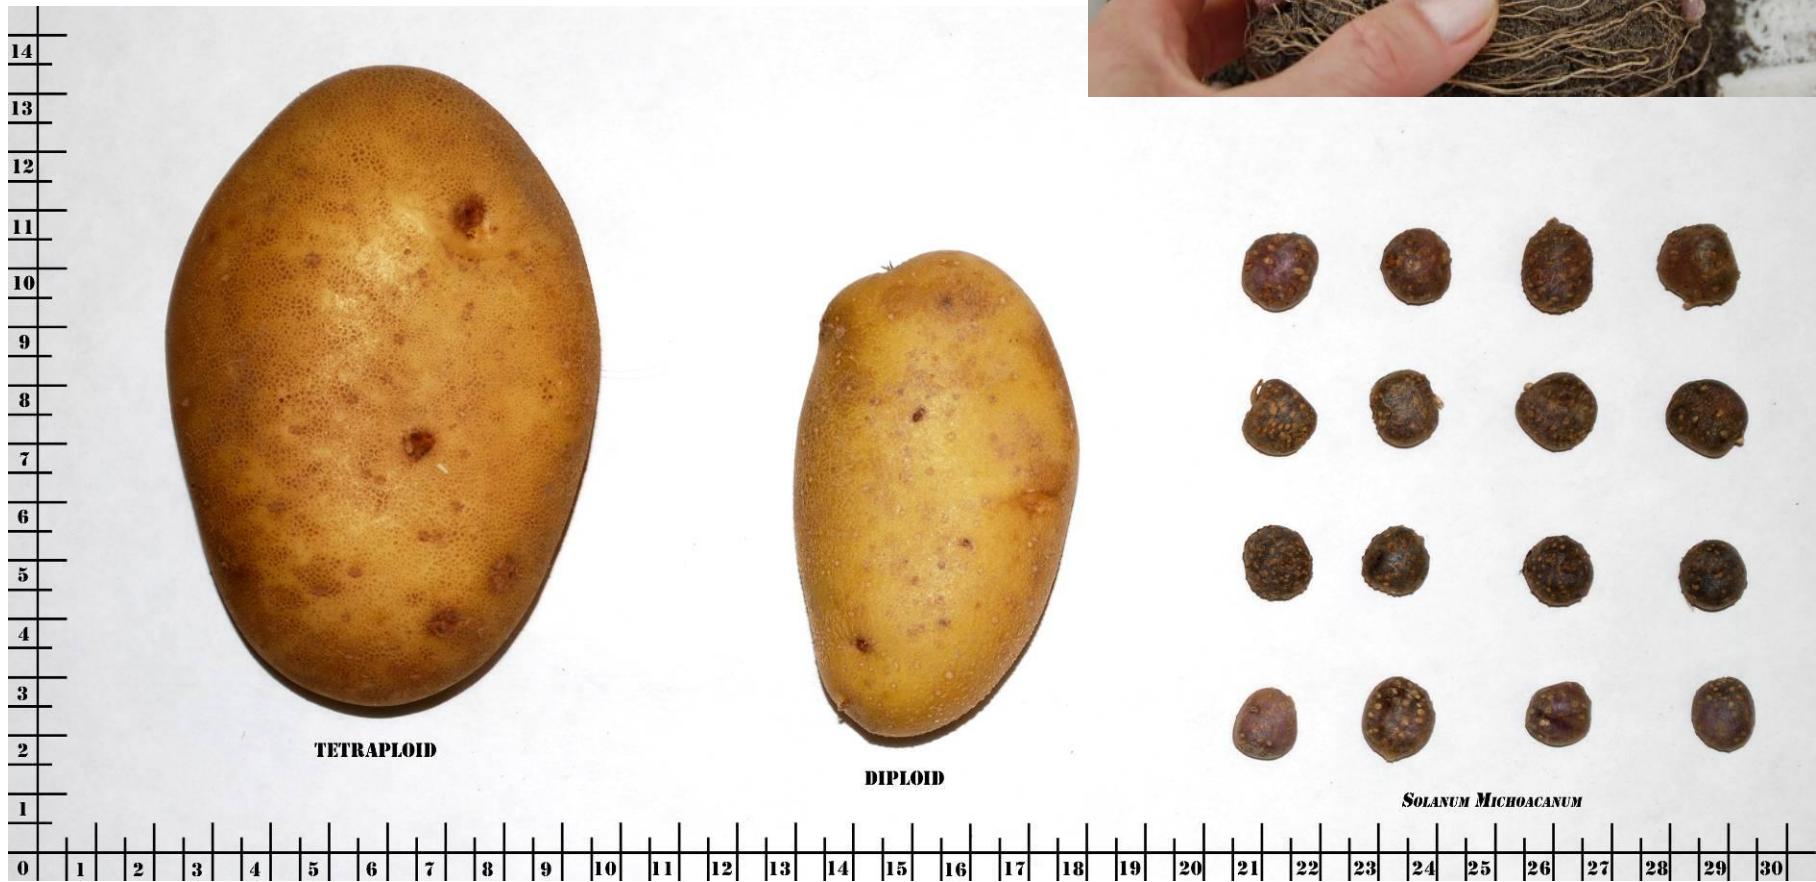

- Originates from:
Mexico, state: Michoácan,
habitat: humid, grassy, among rocks,
2000-2100 m above sea level

- Natural hybrid:
S. bulbocastanum x *S. pinnatisectum*
(Hawkes 1990)

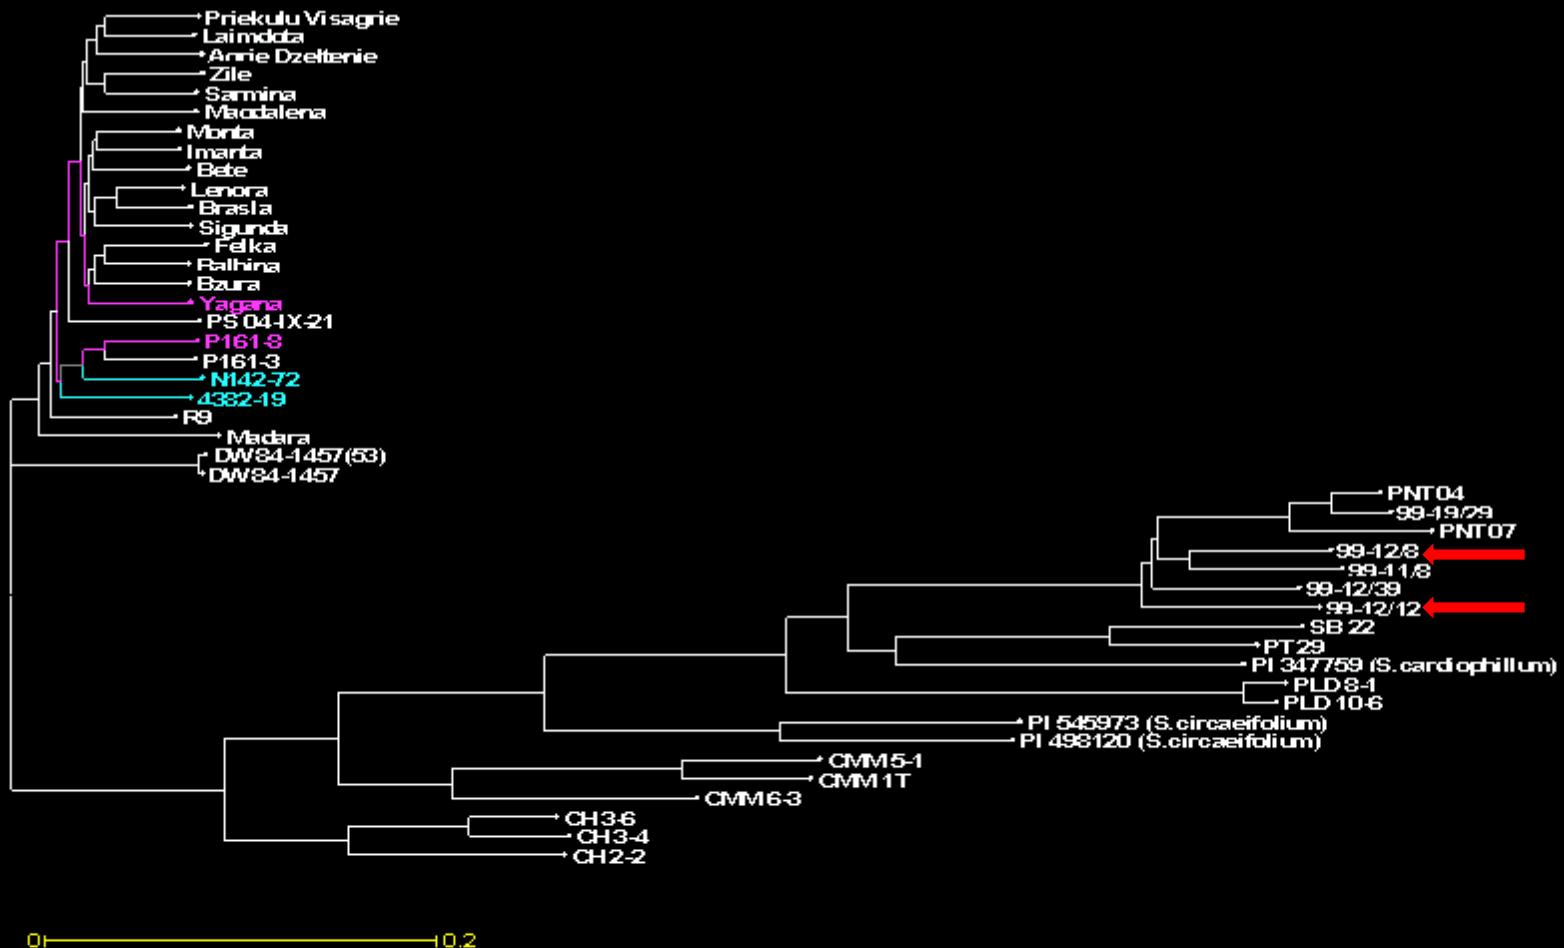

- Selected clones:
- resistant to *P. infestans*
- suitable for cold chipping

Tuber sizes

Unweighted neighbour-joining tree based on a Jaccard-distance matrix computed from 1,690 DArT markers

Solanum ruiz-ceballosii Cárd. 2x (2EBN) VIR8664 (VIR7370)

274

VII. Series Tuberosa

Figure 127. – *Solanum sparsipilum* (Ochoa 662). 1. Flowering plant.
2. Corolla. 3. Petal. 4. Stamens, dorsal view. 5. Pistil. 6. Calyx.
7. Pedicel and pistil. 8. Fruit. All $\times \frac{1}{2}$.

- Originates from:
Bolivia, Peru

habitat: inter-Andean valleys, barren, eroded
or cultivated soil

2400-3000 m above sea level

- Syn. *S. sparsipilum*

- Selected clones:
- resistant to *P. infestans*
– low tendency to enzymatic blackening
and after-cooking darkening

Methods for late blight resistance testing

- whole leaf test/spray inoculation **mch**
- detached leaflet test/droplet inoculation **rzc**
- tuber slice test/droplet inoculation **rzc**
- three *P. infestans* isolates
- assessment in 1-9 scale, 9 = most resistant

Whole leaf test

Distribution of mean leaflet resistance in *rzc* mapping population

MP 324 (1.2.3.4.(5).6.7.(8).10.11) PL 1994

Mapping populations - summary of resistance assessments

08-42

- *S. michoacanum (mch)*
- Small leaves and tubers – whole leaf test better than detached leaflet test, tuber tests?
- Pearson's correlation coefficient between results of these two tests: 0.809, p=0.00
- R (≥ 6): S ratio 1: 2
- An R gene?

05-18

- *S. ruiz-ceballosii (rzc)*
- Pearson's correlation coefficient between results of detached leaflet and tuber slice tests: 0.862, p=0.000
- Leaflets R (≥ 7): S ratio 1: 1
- Slices R (≥ 7): S ratio 1: 1
- An R gene
- In leaflet tests - many moderately resistant individuals – additional QTL

Mapping

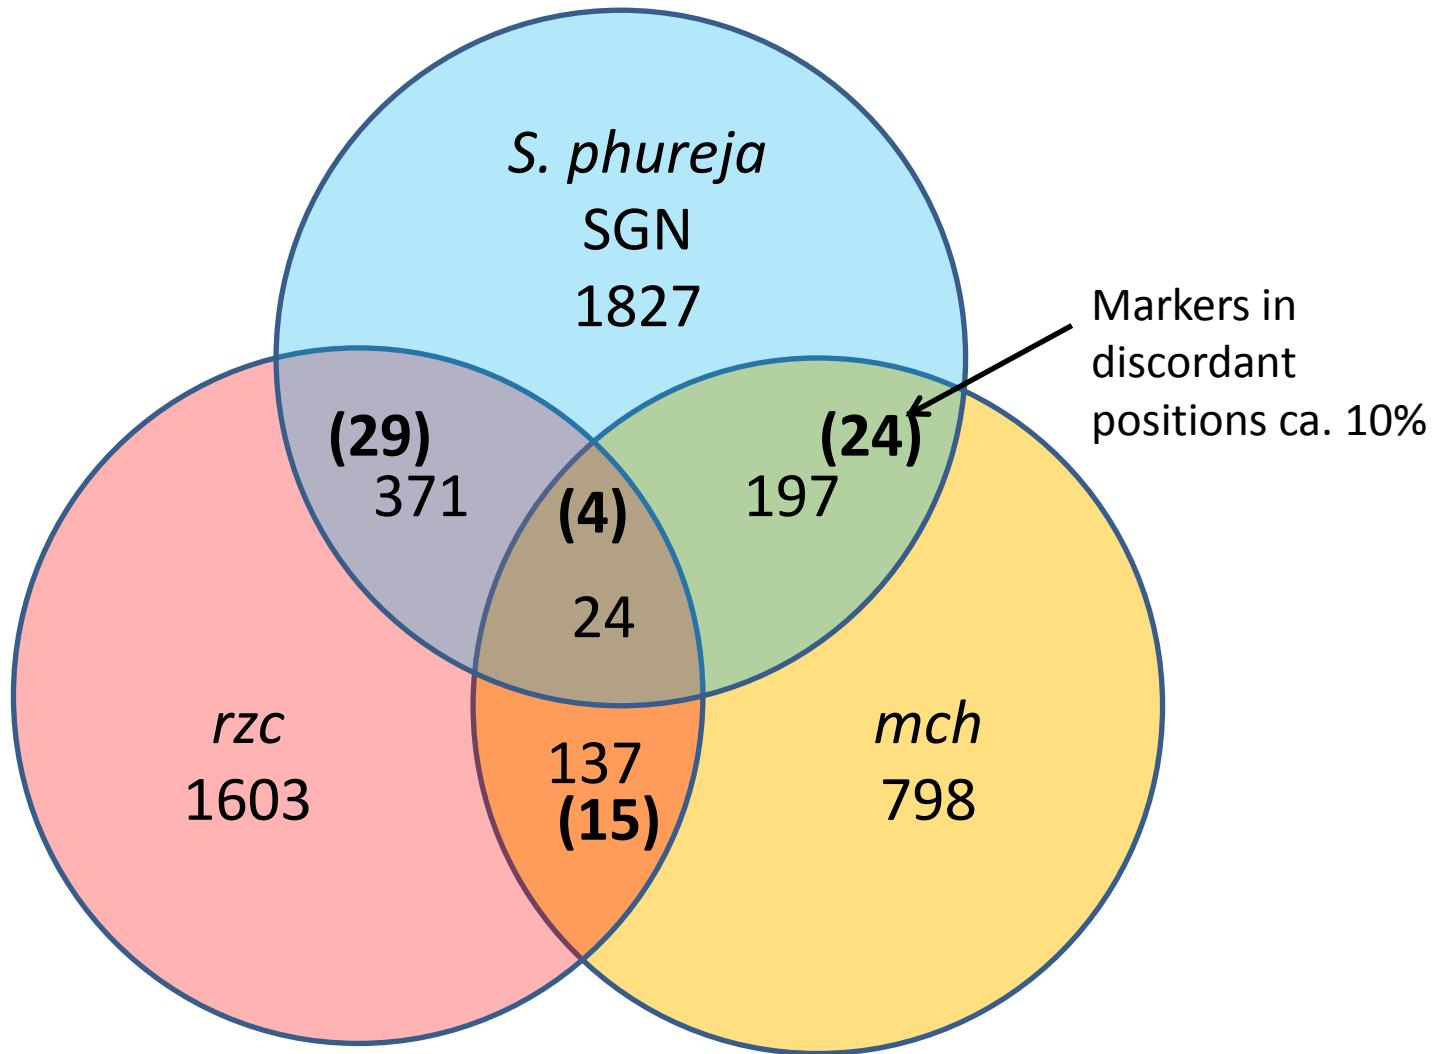

- Diversity Array Technology (DArT)
- Sequence-specific PCR markers for chromosome identification (publication, SGN and GABI databases)
- JoinMap 4[®]: CP (cross pollination) population maternal and paternal maps, common map, independence LOD > 3, regression algorithm and Haldane's mapping function

Mapping Results

	<i>rzc</i>			<i>mch</i>		
Chromosome	Number of markers	Number of reference markers	Length (cM)	Number of markers	Number of reference markers	Length (cM)
I	167	4	103.5	133	4	116.3
II	168	4	113.9	75	4 (+2 ^a)	108.4
III	183	4	143.2	87	4	93.1
IV	74	2	93.9	73	4	99.7
V	195	3	91.8	32	3 (+1 ^b)	66.8

II [2]

Markers in blue are the markers present on the *Solanum phureja* diploid map 2010 (SGN) that were mapped in discordant positions on the dH Balbina x *S. ruiz-ceballosii* 99-10/36 map.

Markers in yellow are the markers present on the *Solanum phureja* diploid map 2010 (SGN) that were mapped in corresponding positions on the dH Balbina x *S. ruiz-ceballosii* 99-10/36 map.

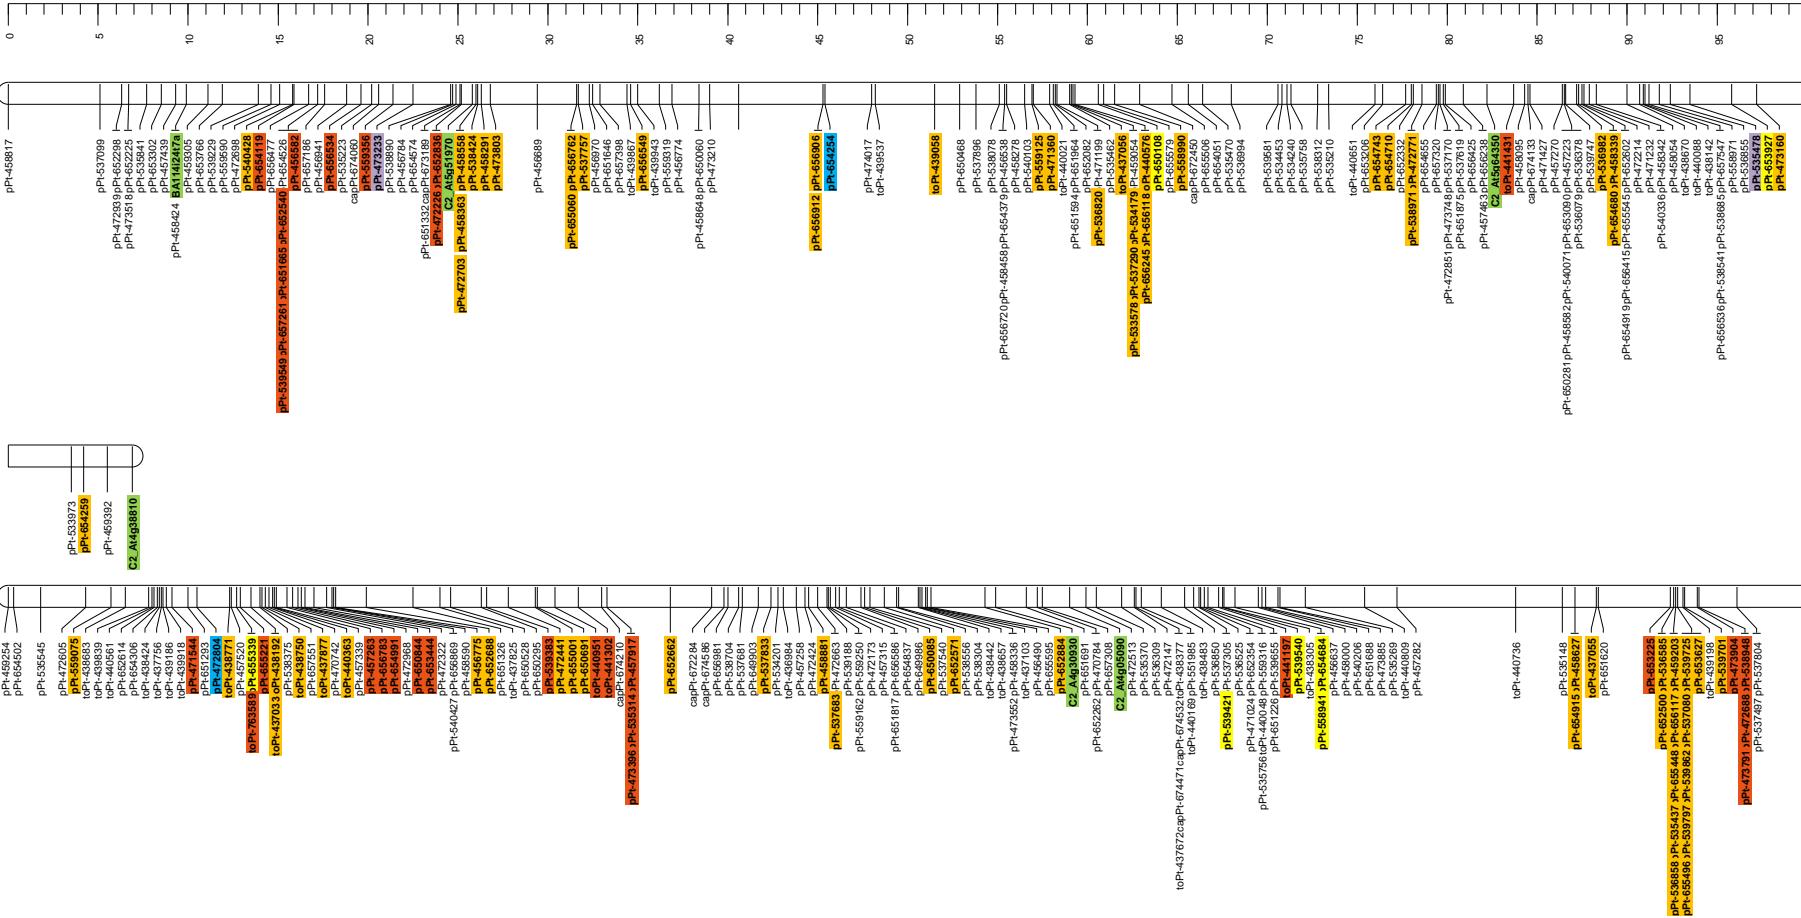

Markers in green are the reference sequence-specific markers.

Markers in orange are the markers present on the *S. michoacanum* map (Śliwka et al. 2011) that were mapped in corresponding positions on the dH Balbina x *S. ruiz-ceballosii* 99-10/36 map.

Markers in purple are the markers present on the *S. michoacanum* map (Śliwka et al. 2011) that were mapped in discordant positions on the dH Balbina x *S. ruiz-ceballosii* 99-10/36 map.

Markers in bright yellow are the markers present on both the *S. michoacanum* map (Śliwka et al. 2011) and the *Solanum phureja* diploid map 2010 (SGN) that were mapped in corresponding positions on the dH Balbina x *S. ruiz-ceballosii* 99-10/36 map.

Markers in red are the markers present on both the *S. michoacanum* map (Śliwka et al. 2011) and the *Solanum phureja* diploid map 2010 (SGN) that were mapped in discordant positions on the dH Balbina x *S. ruiz-ceballosii* 99-10/36 map.

Hot spots of R genes for resistance to *P. infestans* on potato genetic map

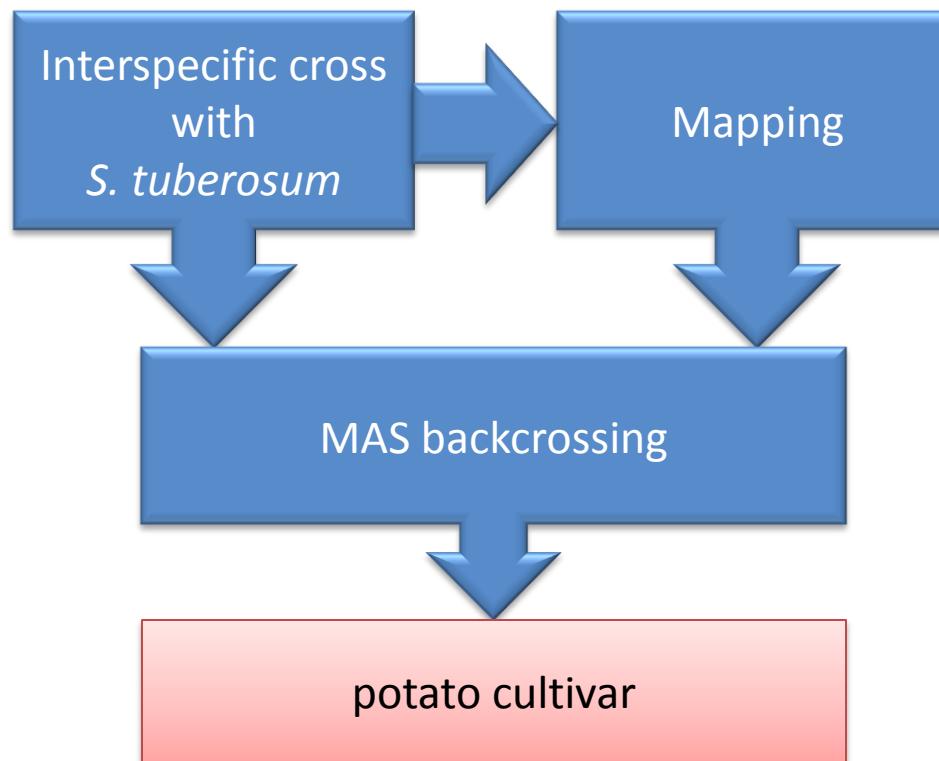

Transfer of resistance to cultivated potato

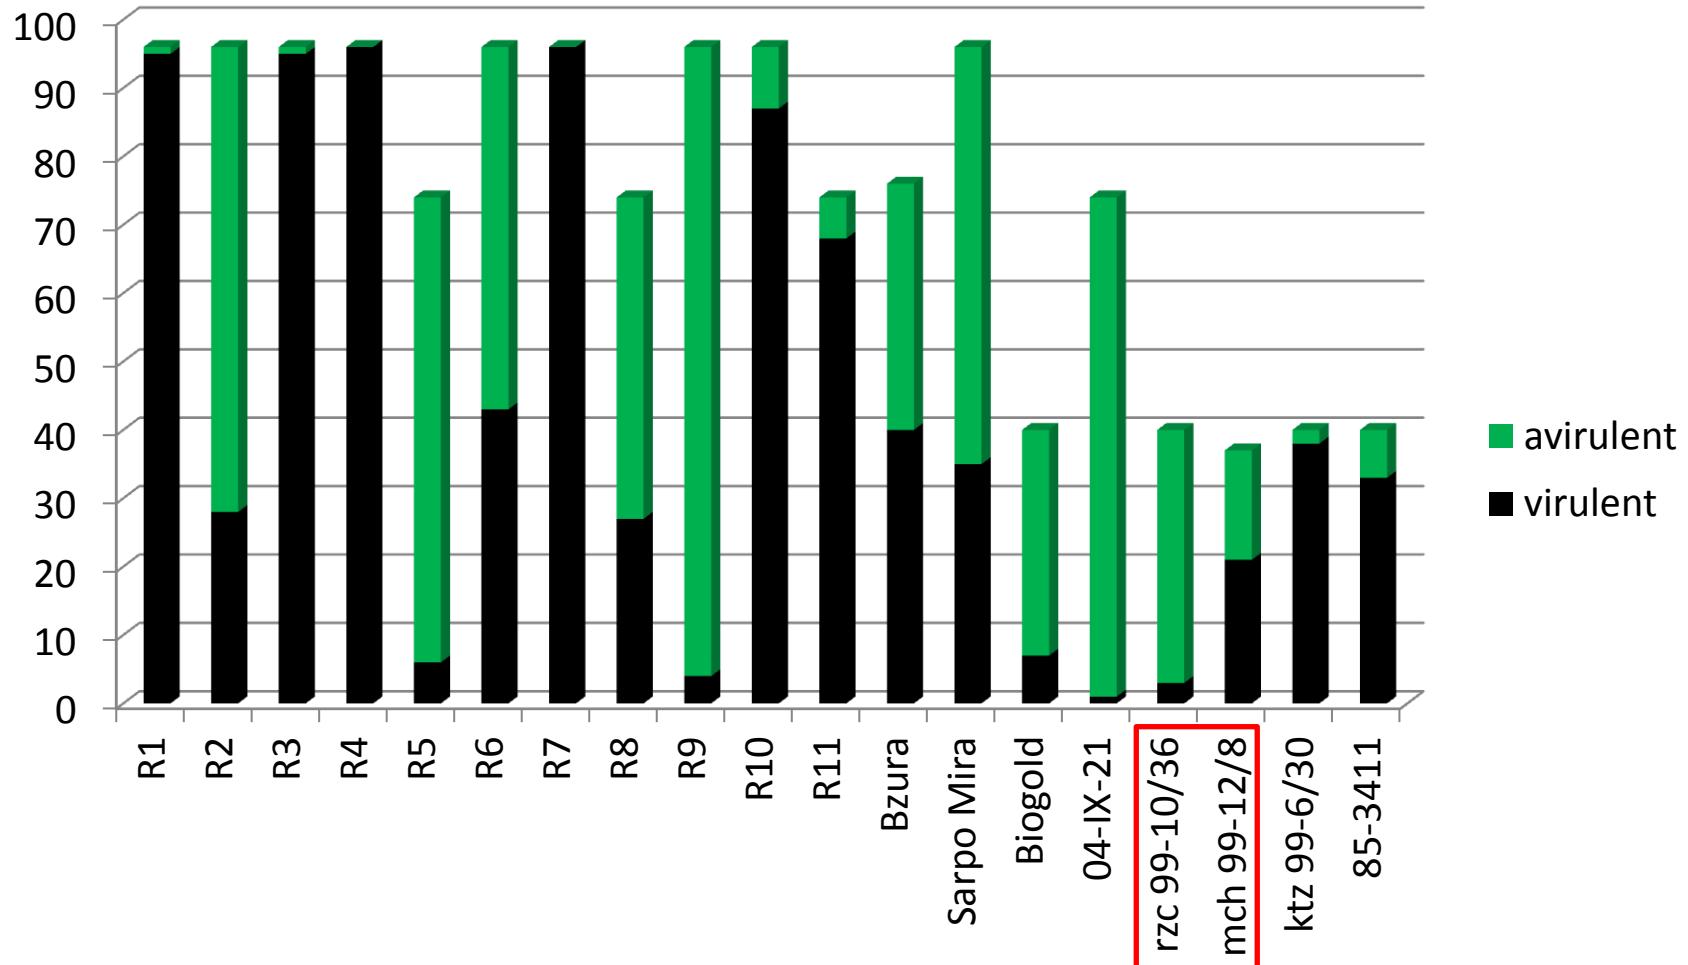

Transfer of resistance to cultivated potato

S. ruiz-ceballosii

Virulence 2009

Summary

- *Rpi-rzc1* and *Rpi-mch1* genes for late blight resistance were identified and mapped
- Both genes can be transferred into cultivated potato gene pool and exploited in gene pyramiding
- Two genetic maps were constructed using DArT markers – valuable resource for new mapping studies
